CELL SALTS - One of the best features of these formulas is that they are infused with the vital minerals missing from most daily skincare products today—cell salts. You probably know about Himalayan and Dead Sea salts. These can cause dehydration in the skin while cell salts do not; they are devoid of the dehydrating “saltiness” associated with these other salts, in fact they are not any kind of “table salt” at all. Cell salts are extracted macro and micro minerals that are fundamental to the health of our skin—minerals such as calcium sulfate (in its natural state from Mother Earth, not man made calcium sulfate). Cell salts are as vital to the health of skin as water is to the body. In fact they are as abundant in the body as water is. Because cell salts are extracted minerals they are in fact 80 percent more bioavailable than any other “healthy salt” on the market today able to reach the deepest part of the epidermis—giving your skin the best result.

HEMP OIL is considered the most nutritional oil available and provides the body with a full spectrum of amino acids and proteins, making it an essential part of the health of the skin and hair.

Oxygenating the super omega oils with activated **COSMETIC-GRADE OXYGEN** is the final step in developing an effective emollient with properties that aid in providing vital oxygen to the epidermis.

Tiffany Andersen, a top Las Vegas aesthetician, holistic health practitioner and stage IV cancer survivor, set out to create a skincare line that infused pure nutrition into the skin. Her story began 25 years ago after suffering a catastrophic car accident that almost left her paralyzed. Her search for elements to help rejuvenate the body led her down a path of intensive studies and enlisting support from experts in holistic health and beauty—MDs, biochemists, clinical pharmacists, and specialized chemists, who understand the value of organically purified elements. Tiffany and her team developed a unique process of purifying elements over time to extract living minerals from nature’s most precious resources such as herbs, metals, gems, and minerals. The ingredients using this exclusive process were first introduced by Tiffany in her anti-aging skincare collection, Gavée Gold (pronounced JAH-vey), and have now been expanded to the Salts Alive Bath and Body Line.
